Research Mission

Improving Human-AI programming environments require a deep understanding both of how these tools work and of how programmers use them. My work spans these two through a combination of *Programming Languages* techniques, *Human-Computer Interactions* methods, and *Artificial Intelligence* approaches. These skills allow me to identify user-focused challenges and overcome them, especially those encountered in a developer's environment.

Research Projects

Human-AI Collaborative Programming 2021-2024

Our groundbreaking study identified how programmers use tools like Copilot: they either *accelerate* through a task, or use the tool to *explore* their problem space^[GCP]. Our findings identified difficulty in validating AI-generated code, but our technique with live programming eases this difficulty^[LEAP]. Current work-in-progress highlights the “wisdom of the crowds” of an LLM to assist in design space exploration.

Type Directed Synthesis in Haskell 2018-2021

Our novel synthesis technique generates Haskell programs that are guaranteed to satisfy the user's intent quickly by using abstract refinements^[TYGAR]. A user-study proves that our multi-modal search with examples and tests aids program comprehension, allowing a user to complete more tasks^[H+]. A followup study reinforces the need for tool-assisted code validation^[PRS].

Work Experience

Research Intern.

 Microsoft, Remote, Summer 2022

Mentors: Arjun Radhakrishna, Gustavo Soares

Worked with the PROSE team on novel interactive program synthesis tool for API migrations.

Software Engineer II.

 Jana Mobile, Boston, Massachusetts, Feb 2017 - Jun 2018

2018 Created mobile anti-fraud mechanisms and data collection streams

2017 Managed data scientists' data collection APIs

Software Engineer I.

 Uber Technologies, San Francisco, Jul 2015 - Dec 2016

2016 Lead team migration to golang, with a new anti-fraud microservice.

2015 Owned `business.uber.com`. Led service migration to React.

*Equal Work

Elm Intern. Prezi, Budapest, Hungary, Summer 2014
Mentor: Evan Czaplicki
Built first interactive, time-traveling debugger for Elm-lang.
This was the first such production tool for any language.

Invited Talks

Grounded Copilot: How Programmers Interact with Code-Generating Models. 2023 - OOPSLA (Cascais, Portugal)
Program Recognition in Synthesis. 2021 - PLATEAU (Carnegie Mellon University)
Digging for Fold: Synthesis-aided API Discovery for Haskell. 2021 - OOPSLA (Chicago), 2020 - OOPSLA 2020 (virtual)
Component-based Type Driven Synthesis. 2019 - University of California, San Diego

Teaching

Graduate Teaching Assistant (UC San Diego)
Courses: undergraduate and graduate programming languages.
Fall 2023, Spring 2022, Spring 2021, Fall 2019.
Supervisor: Nadia Polikarpova

Undergraduate Teaching Assistant (Tufts University)
Course: undergraduate programming languages
Fall 2014.
Supervisor: Kathleen Fisher

Service

Reviewer: CHI 2024, PLATEAU 2024
Student Volunteer Co-Chair: PLDI 2023, 2024
Artifact Evaluation Committee: ICFP 2020, ICFP 2021
